Instructions for installing and removing the browser extension: Mozilla Firefox

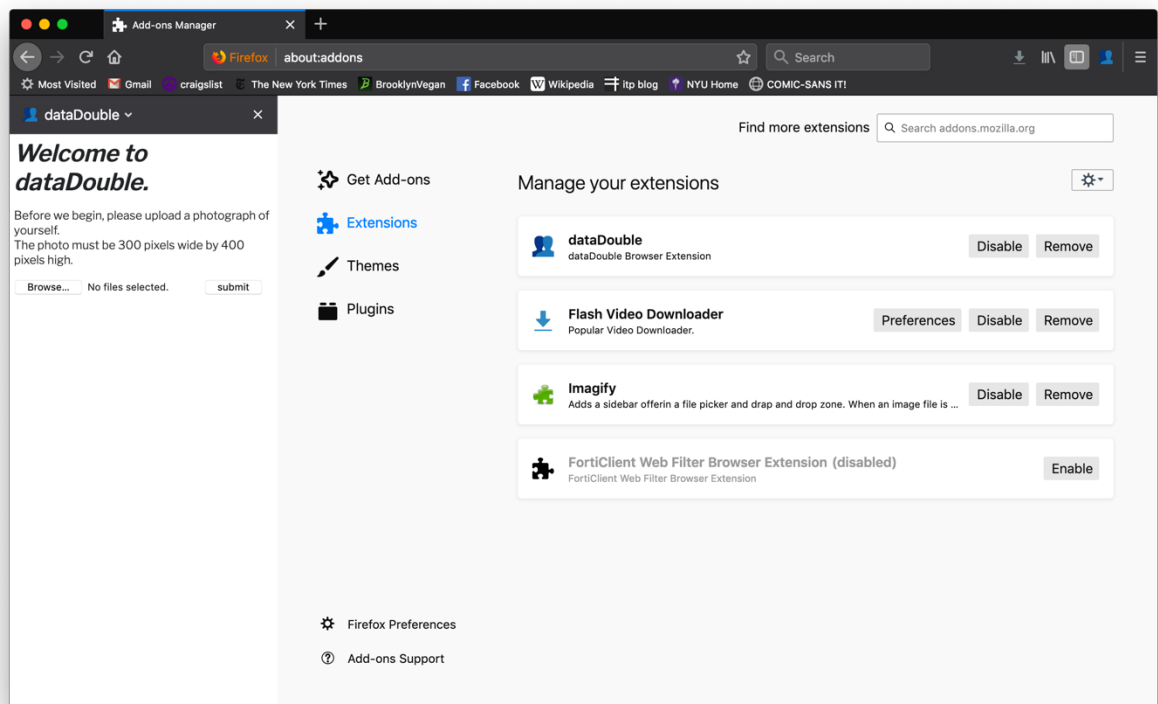

****NOTE: Please do not quit the Firefox application while the extension is running. You can open and close windows and tabs, but if you actually quit the browser the data will be lost and you will have to start the two weeks over. If this happens, please contact Roopa ASAP.****

Installation:

1. Launch Firefox, then select “Tools” > “Add-ons” from the menu.
2. In the “Add-ons Manager” tab that opens, navigate to the “Extensions” section by clicking the button on the left hand side (if it does not load automatically).
3. Drag and drop the project extension file on to the list of extensions, and install it when prompted to do so by Firefox:

4. The extension should now be activated in the browser. Follow the instructions on the sidebar to set it up:

Please note that the sidebar will not refresh the data automatically; you will need to open and close it by clicking on the toolbar icon in order to get updated information.

Removal:

1. Launch Firefox, then select “Tools” > “Add-ons” from the menu.
2. In the “Add-ons Manager” tab that opens, navigate to the “Extensions” section by clicking the button on the left hand side.
3. Find the project extension and click the “Remove” button.
4. The extension will be removed from the browser.
