**PLEASE NOTE: You cannot quit Chrome while using this extension.** Closing windows is fine, but please do not quit out of the application while using dataDouble.
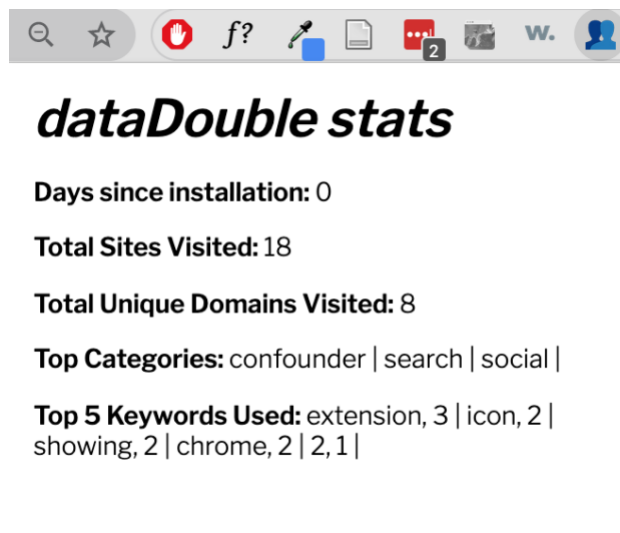

1. Download the source code folder from here: https://www.dropbox.com/sh/xhlnfdxvb0qaokc/AADsKXejYbip97idrBo51-cYa?dl=1

2. Unzip the downloaded folder.

3. Enable Developer Mode in Chrome by navigating to chrome://extensions and toggling the "Developer Mode" button in the top right corner. When the mode is activated, the button will be blue.

4. On chrome://extensions, click the button that says "Load unpacked".

5. When prompted to select a folder, navigate to the downloaded source code folder. Select the top folder (called "chrome") and hit OK or whatever confirms the file selection.

6. The extension should be running.

7. You will need access to the extension in your toolbar like this:

If the icon (the two silhouettes) does not appear in the browser toolbar, click on the icon of the puzzle piece, and click the three vertical dots next to the dataDouble option. Click the menu option that says "Pin". This should make the icon appear.

8. Follow the instructions on the extension when you first click on it to upload a photo. Once you upload a photo at the correct dimensions, you will see a window with your stats:

dataDouble stats

Days since installation: 0

Total Sites Visited: 18

Total Unique Domains Visited: 8

Top Categories: confounder | search | social |

Top 5 Keywords Used: extension, 3 | icon, 2 | showing, 2 | chrome, 2 | 2, 1 |

9. After 6 days, you will see a button on the extension popup to download your final portrait. Clicking on it will download the image to your computer.

If you have any questions or issues with installation, email me at roopa.vasudevan@gmail.com!
